

Pivotree WMS Solving warehouse complexity today!

SCAN ME

Omni-Channel Readiness. Future-Ready Micro-Fulfillment.

The Challenges

Warehouse management can be a challenging and complex task, especially as businesses grow and scale and customer expectations continues to evolve. Disruption and continued market change, has impacted operations globally, and managing omnichannel fulfillment has become a significant challenge.

Are you struggling with inefficient warehouse operations that leave you with inaccurate inventory, missed deadlines, and declining margins?

Limited Inventory Visibility

Limited inventory visibility leads to inaccurate orders, stock-outs, cancelled orders and broken delivery promises. This will ultimately lead to declining margins.

Technology

Implementing or Integrating new technology can be daunting and time-consuming. Cost and expertise to ensure systems are integrated seamlessly is a risk, but not doing anything will affect competitive advantage.

Unable to Meet Demand

Managing orders can be a complex process that involves many different steps, such as picking, packing, and shipping. Fulfilling orders accurately and on time is critical for customer satisfaction.

Customer Experience

Today's customer expects fast and accurate order fulfillment. Inaccurate orders and shipping delays can lead to dissatisfied customers and loss of business.

Inefficient Warehouse Operations

Labour and talent gap continues to impact productivity. Along with inefficient space utilization, leading to duplicated effort, wasted space and safety concerns, both of which contribute to challenges in capacity and performance.

If you are considering implementing a Warehouse Management System (WMS), we recommend going through our Request for Proposal (RFP) process.

Product Overview

Pivotree WMS is a sophisticated yet simple to use, SaaS platform that features a microservices-based architecture. It helps you to optimize warehouse fulfillment operations and scale for growth and demand. Giving you the flexibility to choose specific modules and capabilities that can be installed, deployed, maintained and customized to best suit your business needs.

Accelerating a new era of frictionless fulfillment that is fast, flexible and future-ready.

Faster Time to Value and ROI with Pivotree WMS

Rapid Time to Value - Pre-defined process flows and user friendly configuration to reduce cost and increase speed.

Tier 1 Solution Capabilities - Tier-1 functionality depth with extensibility and no-code process-modeling. **90%** of functionality out of box.

Robust Reporting and Dashboards - Dashboards designed by Supply Chain Experts for WMS. Visibility into warehouse and adjacent systems (OMS and TMS).

API Driven Solution - Rapid deployment of new modules, or rolling out new facilities. Access to **250+** API allowing for seamless integration with upstream systems. Built in integration platform.

Modern SaaS Architecture - Highly available, cloud native, microservices architecture creates a reliable, secure, and highly scalable solution. Web-based interface allows any device using HTML5 to connect.

Service Definition Framework Out of Box - Visual process modelling allows you to configure workflows by just dragging and dropping processes.

Secure - Security Management enables you to ensure that each user accesses only the information that is appropriate for carrying out their tasks.

Event and Alerting Framework - Creation of customized alerting and with automated response.

Key Benefits

Pivotree WMS offers a wide range of features and benefits that is highly scalable and customizable, which means it can adapt to your changing business needs over time.

Fulfillment Network Facilities Management

Accelerate onboarding of new fulfillment facilities and customers on a single instance with easy configuration and UI

Process Modeling and Optimization

Visual Process Modeling for inbound, outbound, work order and inventory management processes

Inventory Tracking & Handling

Manage and maintain inventory accuracy and track incoming (FIFO), storage and outgoing inventory (FEFO) in near real time

Operations Management

Automate and optimize data, task management and execution based on intelligent consolidation

Fulfillment Optimization

Optimize and scale fulfillment processes with modular deployment of capabilities and seamless integration with all platforms

Alerts and Monitoring

Track warehouse operations in real time and monitor order status and alerts, based on business specific rules to ensure capacity at all times
